

MATHLETICS FOR TABLET DEVICES

Mathletics is available for students to access on tablet devices via our dedicated app *Mathletics Student*. The app is available for both iPad and selected Android devices – and is FREE to download. Students simply use their username and password to log in. *Why not explore Mathletics Teacher – our dedicated app for smartphones?*

MATHLETICS ON TABLETS

When first downloaded, the app will display the student interface. Curriculum activities must be downloaded separately into the app. All available activities* can be downloaded from the **UPDATES** tab at the top of the screen, or by tapping the download icon on an individual activity bar.

As with desktop Mathletics, activities are displayed here. Activities available to download will have a blue icon to download the individual activity directly to the app.

Once downloaded, an activity bar will display as bright orange. The activity is now saved to the app and can be accessed by any student who signs in (provided this activity is a part of their course).

**Important – not all activities are yet available to access via tablet. More are released weekly and are always shown in the UPDATES tab.*

To avoid overloading your school network, consider only downloading individual activities as they are required, rather than all at once.

Data transfer rates are equivalent to using Mathletics on the desktop – however do ensure your school has suitable WIFI provision.

An icon in the Results area of the Teacher Console identifies the activities that are available for use on tablet devices.

All results and student activity is saved and synced in real time. It will appear in Teacher & Parent Console reporting.
